QHN Center Stage

Julie Logan, Product Manager, The MD&D companies of The Johnson & Johnson Family of Companies. [Click Here.](#)

"I am excited about the opportunity QHN provides in continuing to educate healthcare professionals through the Safer Healthcare Now! programs, specifically around surgical site infections"

As part of our membership benefit package and our ongoing commitment to collaboration, we give impassioned improvers within the Network centre stage. We would like to get to know the faces of your organization. If you have a member that should get centre stage, let us know.

QHN Member Stage

Julie Logan | Johnson & Johnson

Julie Logan, Product Manager joined Johnson & Johnson in October 1988. Since then, she held a number of positions before moving to the marketing department and now works as Product Manager with a focus on ETHICON sutures and DERMABOND* Topical Skin Adhesive providing optimal wound healing benefits to patients throughout Canada.

Johnson & Johnson has been instrumental in Julie's development over the past several years. The leadership and mentorship from key individuals within the organisation has helped with her professional growth and her vision for the future, which includes helping address key issues affecting the wellbeing of patients and healthcare providers.

Julie has been fortunate to work with healthcare professionals across Canada who have provided valuable information that has assisted in her understanding of the healthcare system and provided her with the opportunity to develop

Professional Education programs that align with their goals. This aligns with a larger corporate commitment on the part of ETHICON Inc., and Johnson & Johnson Medical Products to play a leadership role in helping facilitate ongoing education that will help promote the advancement of surgical technique and clinical practice in Canada.

Several years ago, Julie began managing the PLUS* Antibacterial Suture product portfolio. This opportunity has allowed Julie to truly understand and take an active role with surgical site infections. She has become extremely passionate about this subject after understanding the impact and devastation of a surgical site infection to a patient, to a healthcare facility and to healthcare professionals.

Julie has worked closely with the Quality Healthcare Network over the past several years and commends their quality improvement initiatives. Their knowledge and diligence to making a difference have truly helped in her journey to understand the significance of infection to our healthcare system.

Julie has developed Professional Education events that focus on surgical site infection awareness and prevention throughout Canada. Since 2005, Johnson & Johnson has led over 25 events using online webinar capabilities. Over time, she has leveraged the expertise of Dr. Charles Edmiston, Epidemiologist in Wisconsin; Dr. Justin de Beer, Orthopaedic Surgeon in Hamilton and Maureen Spencer, Infection Control Manager in Boston as keynote speakers at these events and the feedback from attendees has been outstanding.

Johnson & Johnson have trained over 2,500 healthcare professionals across Canada on prevention and awareness of surgical site infections and continue to provide these programs on an ongoing basis.

We at Johnson & Johnson Medical Products consider ourselves very fortunate to have built the confidence and trust of the healthcare system through the products we offer and through the knowledge we help build, to deliver cost-effective, safe outcomes.

Julie's passion is prevention and awareness of surgical site infections. She has attended well over 20 SSI Professional Education events and continues to get shivers. Dr. de Beer, Dr. Edmiston, and Ms. Spencer have such enthusiasm and communicate their successes and experiences with such passion that it becomes contagious.

It is Julie's belief that if we all do our part and "spread the passion" we can make a difference.

Johnson & Johnson joined the Quality Healthcare Network for their outstanding quality improvement and safety initiatives and their due-diligence to ensure a safe working environment not only for the healthcare professional but also for the

patient. Julie is excited about the opportunity QHN provides in continuing to educate healthcare professionals through the *Safer Healthcare Now!* programs, specifically around surgical site infections are very important.

Julie is proud to be a member of the healthcare industry and proud of the partnerships her organisation has established across the entire system to help make improvements that drive patient safety and the well being of health practitioners.

About Johnson & Johnson:

The MD&D companies of The Johnson & Johnson Family of Companies continue to comprise the world's largest medical technology business and provide treatment options that address some of the world's most pervasive medical conditions with a more comprehensive approach than any other company. Among the products represented by JJMP's business units are; devices for minimally invasive and open surgical procedures; orthopaedic implants; devices for women's health, including breast care and urinary incontinence; devices used for infection prevention, including general purpose sterilizers; and devices for cardiovascular and neurovascular diagnostics and treatment.

Headquartered in Markham, Ontario, JJMP employs over 350 associates across Canada.
